Company Introduction: Lotus Shipping Company

Lotus Shipping Company is an established logistics and supply chain solutions provider based in Chennai, India. The company specializes in facilitating seamless international trade through a comprehensive suite of freight and customs services. With its strategic location in the commercial hub of Mannady, Chennai, near major port facilities, the company is well-positioned to handle complex global logistics requirements efficiently.

Core Services

Lotus Shipping Company operates as a multi-modal logistics provider, offering end-to-end services including:

- ❖ **CHA (Customs House Agent):** Expert handling of customs clearance, documentation, and regulatory compliance for import and export shipments.
- ❖ **Freight Forwarding:** Efficient coordination and shipping of goods across international borders.
- ❖ **Air & Sea Logistics:** Flexible transport solutions tailored to cargo size, urgency, and budget via both ocean and air freight.

Corporate Contact Profile

- ❖ **Key Executive:** S. Uma Shankara Narayanan
- ❖ **Corporate Office:** New No. 108, Old No. 279, Thambu Chetty Street, Mannady, Chennai - 600 001, Tamil Nadu, India.
- ❖ **Mobile Contacts:** +91 9087649272, +91 9940051905
- ❖ **Email:** umalotusuma@gmail.com

The Role and Operational Workflow of a Data Analysis Intern (Logistics & Operations)

A logistics analyst turns daily supply chain data into cost-saving decisions. Their mornings are spent checking dashboards to track on-time deliveries and spot bottlenecks. Mid-day focuses on efficiency: cutting empty truck miles, optimizing routes, and streamlining warehouse operations. In the afternoons, they build visual reports for management and evaluate shipping partners for contract negotiations. Continuously, they use historical data to forecast seasonal demand, ensuring the company has enough trucks and drivers ready for busy periods.

DAY-WISE REPORT

DAY-1: INTRODUCTION

On my first day at Lotus Shipping Company, I learned the basics of the global supply chain, including freight forwarding, routing, and risk management. I also learned about the Customs House Agent (CHA) role, which connects clients with the government by managing import/export documents, taxes, and port inspections.

As a practical example of this work, the company is currently applying to Chennai Customs for a Form "H" Card for an employee, Mr. Hari Haran C. This card is legally required to enter restricted port areas and perform customs clearance. The application requires 12 supporting documents, including his Aadhaar card for identification, a police background check, employment proof, and a fee receipt.

Day-2:- Functions of Logistic Shipment

On the second day of my internship, I focused on the fundamental lifecycle of an international export shipment. I learned the five sequential functions required to move goods securely and efficiently from a supplier to their final destination:

- **Establishing the Export Order:** The process initiates by confirming the order details and finalizing all necessary documentation with the supplier.

- **Arranging Cargo Insurance:** Immediately following the order confirmation, insurance is procured to protect the goods against potential risks during transit.
- **Determining Shipment Type:** A critical step involving the evaluation of cargo volume to select the most efficient shipping method. This means choosing between a shared Less than Container Load (LCL) or a dedicated Full Container Load (FCL).
- **Packaging Goods:** Ensuring all items are securely packed according to strict international standards to prevent damage.
- **Applying the Container Seal:** The preparation phase concludes by attaching a tamper-evident security seal to the container, marking the shipment as officially ready for departure.

Day-3:- Preparation of Invoice

- **Supply Chain Operations:** Learned how to book cargo, optimize air and sea freight routes, and track international shipments from warehouse to final delivery.
- **Customs Clearance & Compliance:** Gained deep knowledge of the Customs House Agent (CHA) role, including filing import/export documents, calculating taxes using HSN codes, and understanding physical cargo inspection rules at the port.
- **Logistics Administration:** Mastered the invoicing workflow by learning how to gather shipment documents, separate third-party reimbursements from company service fees, and apply GST.
- **Government Procedures:** Learned the regulatory requirements for customs clearance work, including how to process mandatory government IDs (like the Form "H" Card) for port access.

Day-4:- Poster Creation & Previous Month Analysis

After our manager assigned us to create a promotional poster, our team researched the target audience and the brand guidelines. We brainstormed concepts and refined them using direct client feedback. Once we had a clear direction, we designed a few modern layouts for management to review. Finally, we checked the design for quality and exported high-resolution files for print and the WordPress site.

The provided dataset is a logistics and shipping log detailing 14 distinct freight movements recorded between April 4 and April 29, 2026. The log tracks key shipment variables including invoice numbers, modes of transport, product descriptions, package quantities, geographical routing (origin to destination), and commercial partners/agents

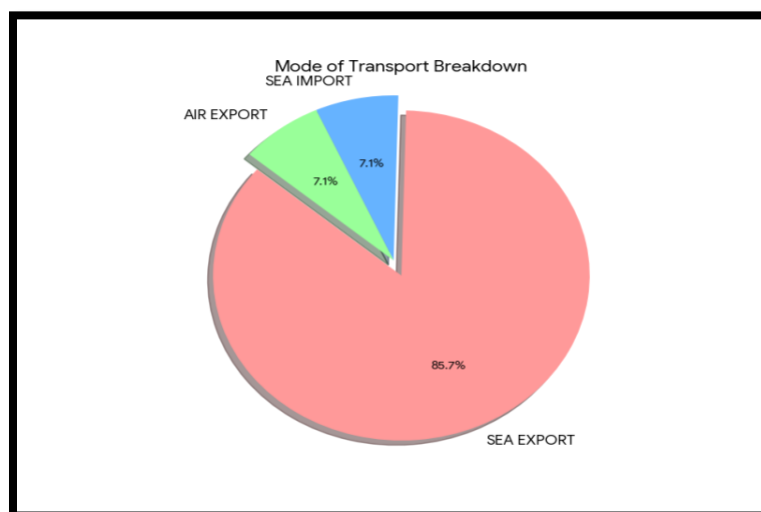

- **Heavy Focus on Sea Exports:** Out of 14 total shipments, 13 were exports leaving Chennai, and nearly all of them (12) moved by sea. Air export and sea import only happened once each.

- **Textiles & Organic Cottons:** The core business is shipping apparel and footwear. The log features lots of sandals, slippers, and clothing like t-shirts, PJs, and baby bodysuits—with "organic cotton" popping up as a major recurring material.
- **Global Footprint:** Shipments are headed all over the world, with deliveries stretching across Japan, Singapore, Australia, New Zealand, the UK, and Denmark.
- **A Lone Machinery Import:** The only inbound shipment was a single sea import from China on April 8, bringing in 4 packages of "Hoshima brand" machinery.

Day-5 & 6:- Sea Export Data Analyst

On our fifth day, after completing our training on shipping basics, Customs House Agent (CHA) procedures, and invoice verification, the company assigned us the role of Data Analysts. In this position, we receive the buyer and seller checklists for sea exports and cross-verify the data against the sea export commercial invoices for accuracy. Once we validate this information, the company proceeds to clear the export shipping bill with the port.

Day-7 & 8:- Air Export Data Analyst

On the seventh day, following a two-day transition period, we moved to the Air Export department as Data Analysts. In this role, we review the buyer and seller checklists for air shipments, cross verifying the details against the commercial invoices to ensure complete accuracy. Only after this data validation does the company clear the export documents with airport customs.

Day-9 & 10:- Import Billing Entry

On Days 9 and 10, we learned the step-by-step process for making an Import Billing Entry using the e-Royal software.

E-Royal IMPEX is designed to digitize and automate the complex documentation and compliance processes required for international trade. It acts as a bridge between logistics companies and government customs portals.

Process of Import Bill Entry

Step 1: General Info

Go to the 'General' tab in the e-Royal software and enter the importer's basic details.

Step 2: IGM Details

Open the 'IGM' section to enter the IGM number, total number of packages, and the gross weight of the cargo.

Step 3: Invoice Data

In the 'Invoice' tab, type in the currency, exchange rate, item prices, and any extra charges like freight or insurance.

Step 4: Product Details

Use the 'Product' tab to enter the exact names and descriptions of the imported goods.

Step 5: Checklist Verification

Go to the 'Checklist' section to review your entries and double-check them against the original paper invoice to make sure everything is 100% correct.

Day-11 & 12:- Export Billing Entry

On Days 11 and 12, we learned the step-by-step process for making an Export Billing Entry using the e-Royal software.

Process Flow: Export Billing Entry

Step 1: Exporter Info

Go to the 'General' tab in the e-Royal software and enter the basic details of the exporter.

Step 2: Invoice Details

Open the 'Invoice' section to enter the billing currency, exchange rate, and any specific charges.

Step 3: Product Details

Use the 'Product' tab to type in the exact names and details of the items being shipped.

Step 4: Tax and MSR Input

Still in the 'Product' tab, go to 'Other Details' to enter the IGST and MSR values for the items.

Step 5: Drawback (DBK) Values

Click on the 'DBK' option inside the 'Product' tab to enter the duty drawback values for the exported goods.

Output: Checklist Generation

Generate the final Export Checklist to double-check all your digital entries against the original physical documents before submitting.

Day-13:- Field work

On the thirteenth day, employees were split into two teams to handle specific tasks:

- **Team 1 (Sudheesh & Nithishraj):** Handled paperwork and couriers, including notarizing documents and delivering a file to OOCL.
- **Team 2 (Abishek & Mohamed Rafiq):** Handled company finances, traveling to Indian Bank to safely withdraw ₹65,000 in cash.

Day-14:- Air Export Bill Clearance

On the fourteenth day of my internship at Lotus Shipping Company, my manager closely supervised me as I analyzed an air export invoice to develop a comprehensive compliance checklist. Under their guidance, I conducted a thorough audit of the document, carefully cross-referencing billing items, weight specifications, and regulatory codes to ensure complete accuracy. Using this data, I drafted a meticulously organized air export checklist to serve as a Standard Operating Procedure (SOP). My manager then reviewed and approved the final checklist, and both documents were officially filed into the export clearance records for future operations.

Day-15:- Sea Import Bill Clearance

On the fifteenth day, we received the sea import invoice. The Managing Partner of Lotus Shipping Company assigned us the critical task of analysing this document and generating a comprehensive checklist based on its contents. We began by thoroughly reviewing the invoice to verify the accuracy of all provided information, carefully cross-referencing details such as freight charges, container numbers, and consignee data. Following this detailed analysis, we drafted the sea import checklist, ensuring every compliance requirement was meticulously documented. Once the checklist was perfected, the Managing Partner officially filed both the completed checklist and the original invoice into the import clearing file, ensuring everything was organized for seamless customs processing.

Internship Overview

The report details a 15-day internship (from May 15 to May 29, 2026) completed at Lotus Shipping Company in Chennai. The intern functioned primarily within a Data Analysis (Logistics & Operations) role, working heavily with customs documentation and specialized shipping software.

Knowledge Gained

During the internship, the author acquired comprehensive theoretical and practical knowledge regarding global trade operations:

- **Logistics vs. Shipping:** Learned the difference between planning the entire supply chain (logistics) and actually moving the goods (shipping).
- **Customs Compliance:** Saw how a Customs House Agent handles government rules, taxes, and legal paperwork for clients.

- **Shipping Operations:** Learned the basics of cargo insurance, container security, and how to ship full or partial containers (FCL and LCL).
- **Billing & Taxes:** Figured out how to calculate service fees, add third-party costs (like port fees), and apply GST.
- **Industry Software:** Gained hands-on practice using e-Royal IMPEX software for data entry, filing documents, and accounting.

Key Outcomes & Tasks Completed

The internship translated theoretical knowledge into actionable operational tasks:

- **Data Analysis:** Analyzed 14 freight movements (April 2026), identifying that the company's primary business is sea exports of textiles and apparel (specifically organic cotton) to Denmark and Australia.
- **Invoice Auditing:** Successfully cross-checked and verified buyer/seller checklists against commercial invoices for various sea and air shipments.
- **Digital Billing:** Processed live import and export bills in the e-Royal software, accurately inputting exchange rates, IGST, and cargo descriptions.
- **SOP Creation:** Developed official compliance checklists (Standard Operating Procedures) for customs clearances, which were approved by management for official company use.
- **Marketing & Fieldwork:** Designed a promotional poster for digital marketing and handled essential field operations, including banking and document notarization.

Conclusion

My 15-day internship at Lotus Shipping Company gave me real-world experience in global logistics. By combining basic knowledge of freight and customs with hands-on data analysis, I saw how accurate information keeps international trade moving smoothly. Ultimately, I learned how a Customs House Agent (CHA) uses their expertise and careful data management to lower costs and keep the supply chain strong.
